IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with <u>underlining</u> and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claims 1, 2, 4, 5 and 7, CANCEL claims 3 and 6 and ADD new claim 8 in accordance with the following:

1. (Currently Amended) A Web server for transmitting a Web page ~~to a terminal device of a user~~ via a network, comprising:

an operation portion ~~for~~ determining the entire or a part of contents of <u>a</u> ~~the~~ Web page in accordance with a parameter designated by <u>a</u> ~~the~~ user;

a contents information process portion ~~for~~ making a storage portion store ~~one or more~~ contents information indicating the contents <u>of the Web page</u> determined by the operation portion <u>in accordance with the parameter designated by the user</u> in connection with <u>Web page identifying information for</u> the Web page and <u>user identifying information for</u> the user;

a Web page generation portion ~~for~~ generating <u>a</u> ~~the~~ Web page in accordance with the contents information <u>determined by the operation portion</u>; ~~and~~

a <u>Web page</u> transmission portion ~~for~~ transmitting the ~~generated~~ Web page <u>generated by the Web page generation portion</u> to <u>a</u> ~~the~~ terminal device of the user <u>who designated the parameter relating to the Web page;</u>

<u>a contents information extraction portion extracting from the storage portion the contents information corresponding to Web page identifying information and user identifying information both of which are designated by an administrator;</u>

<u>a Web page regeneration portion regenerating a Web page in accordance with the extracted contents information; and</u>

<u>a regenerated Web page transmission portion transmitting the Web page regenerated by the Web page regeneration portion to a terminal device of the administrator who designated the Web page identifying information for the Web page.</u>

2. (Currently Amended) A Web server according to claim 1, wherein the Web page generation portion generates the Web page <u>in accordance with only necessary contents information among the contents information,</u> ~~by obtaining only contents information necessary for generating the Web page among the contents information from the contents information~~

2

~~process portion~~, and

the contents information process portion makes the storage portion store only the contents information <u>used by</u> ~~given to~~ the Web page generation portion among the contents information.

3. (Cancelled)

4. (Currently Amended) A Web server having a function of a Java servlet for transmitting a Web page ~~to a terminal device of a user~~ via a network, comprising:

a business logic <u>unit</u> ~~for~~ determining the entire or a part of contents of <u>a</u> ~~the~~ Web page in accordance with a parameter designated by <u>a</u> ~~the~~ user;

a contents information process logic <u>unit</u> ~~for~~ making a storage portion store ~~one or more~~ contents information indicating the contents <u>of the Web page</u> determined by the business logic <u>in accordance with the parameter designated by the user</u> in connection with <u>Web page identifying information for</u> the Web page and <u>user identifying information for</u> the user;

a screen generating logic <u>unit</u> ~~for~~ generating <u>a</u> ~~the~~ Web page in accordance with the contents information <u>determined by the business logic</u>; ~~and~~

a <u>Web page</u> transmission logic <u>unit</u> ~~for~~ transmitting the ~~generated~~ Web page <u>generated by the screen generating logic unit</u> to <u>a</u> ~~the~~ terminal device of the user <u>who designated the parameter relating to the Web page; and</u>

<u>a replay logic unit regenerating a Web page in accordance with the contents information that is stored in the storage portion and corresponds to Web page identifying information and user identifying information both of which are designated by an administrator to transmit the regenerated Web page to a terminal device of the administrator.</u>

5. (Currently Amended) A Web server having a function of a Java servlet according to claim 4, wherein the screen generating logic <u>unit</u> generates the Web page <u>in accordance with only necessary contents information among the contents information,</u> ~~by obtaining only contents information necessary for generating the Web page among the contents information from the contents information process logic,~~ and

the contents information process logic <u>unit</u> makes the storage portion store only the contents information <u>used by</u> ~~given to~~ the screen generating logic among the contents information.

6. (Cancelled)

7. (Currently Amended) A ~~computer-readable medium storing a~~ computer program product for use in ~~that is used for~~ a computer that has ~~having~~ a function of a Java servlet for transmitting a Web page ~~to a terminal device of a user~~ via a network, the computer program product making the computer execute the process comprising ~~the steps of~~:

   ~~providing a screen generating logic for~~ generating a ~~the~~ Web page with only contents information necessary for generating the Web page among one or more contents information indicating the entire or a part of contents of the Web page determined by a business logic in accordance with a parameter designated by a ~~the~~ user; ~~and~~

   transmitting the generated Web page to a terminal device of the user who designated the parameter relating to the Web page;

   ~~making a storage portion store~~storing only the necessary contents information ~~given to the screen generating logic~~ among the ~~one or more~~ contents information for generating a Web page in connection with Web page identifying information for the Web page and user identifying information for the user who designated the parameter relating to the contents information; ~~the Web page and the user.~~

   extracting stored contents information corresponding to Web page identifying information and user identifying information both of which are designated by an administrator;

   regenerating a Web page in accordance with the extracted contents information; and

   transmitting the regenerated Web page to a terminal device of the administrator who designated the Web page identifying information for the Web page.

8. (New) A computer program product for use in a computer that transmits a Web page via a network, the computer program product making the computer execute the process comprising:

   determining the entire or a part of contents of a Web page in accordance with a parameter designated by a user;

   storing contents information indicating the contents of the Web page determined in accordance with the parameter designated by the user in connection with Web page identifying information for the Web page and user identifying information for the user;

   generating a Web page in accordance with the determined contents information;

   transmitting the generated Web page to a terminal device of the user who

4

designated the parameter relating to the Web page;

extracting the contents information corresponding to Web page identifying information and user identifying information both of which are designated by an administrator;

regenerating a Web page in accordance with the extracted contents information; and

transmitting the regenerated Web page to a terminal device of the administrator who designated the Web page identifying information for the Web page.
